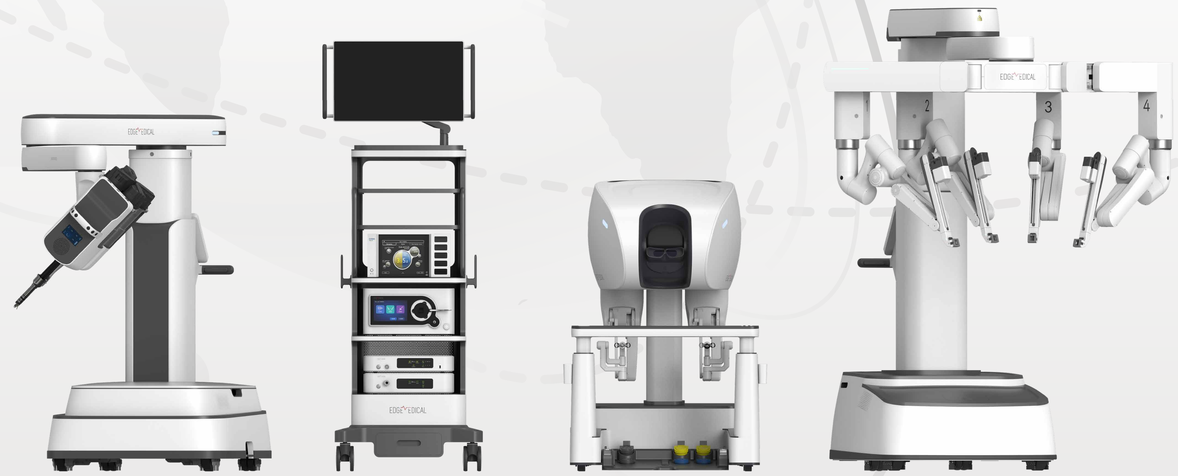
EDGE MEDICAL

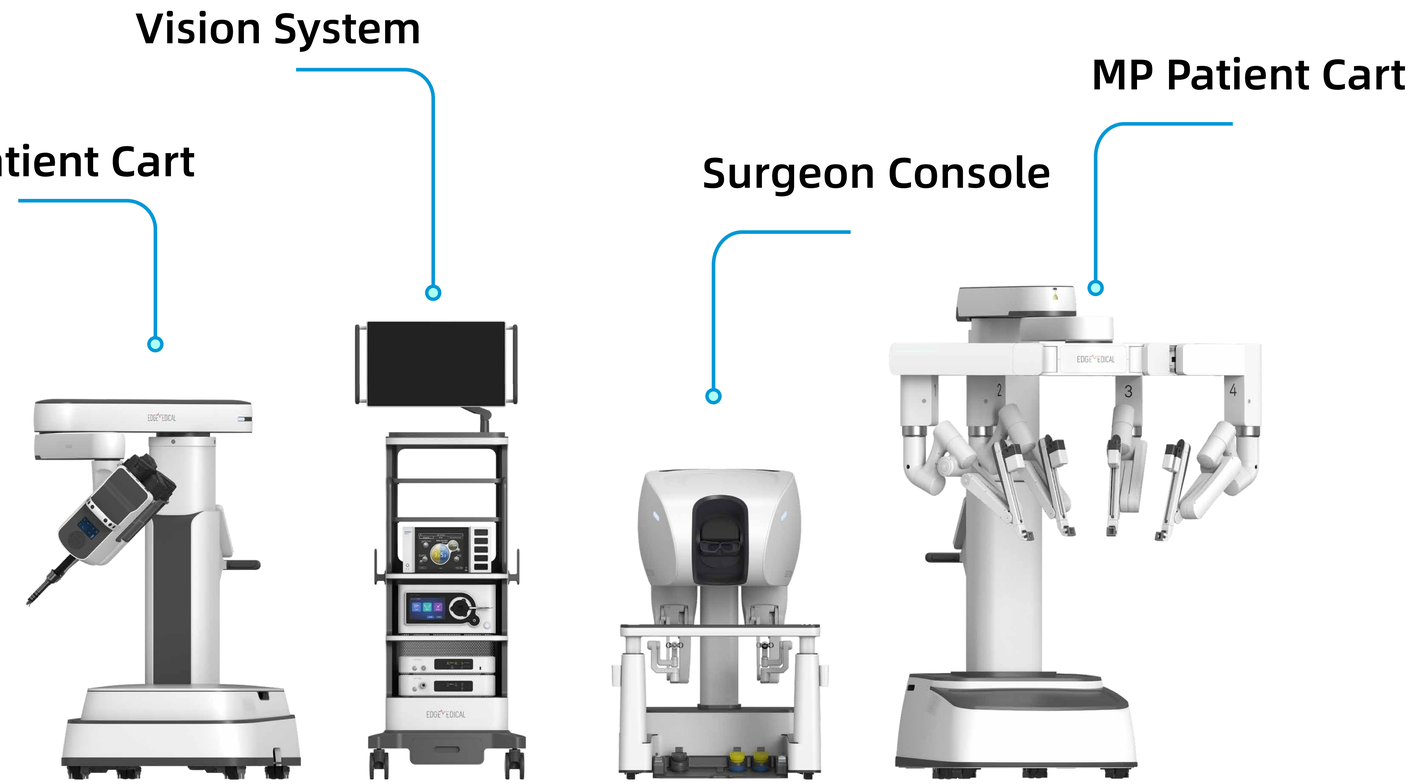
Pionnier in Surgical Field
Excellence in Minimally Invasive Surgery

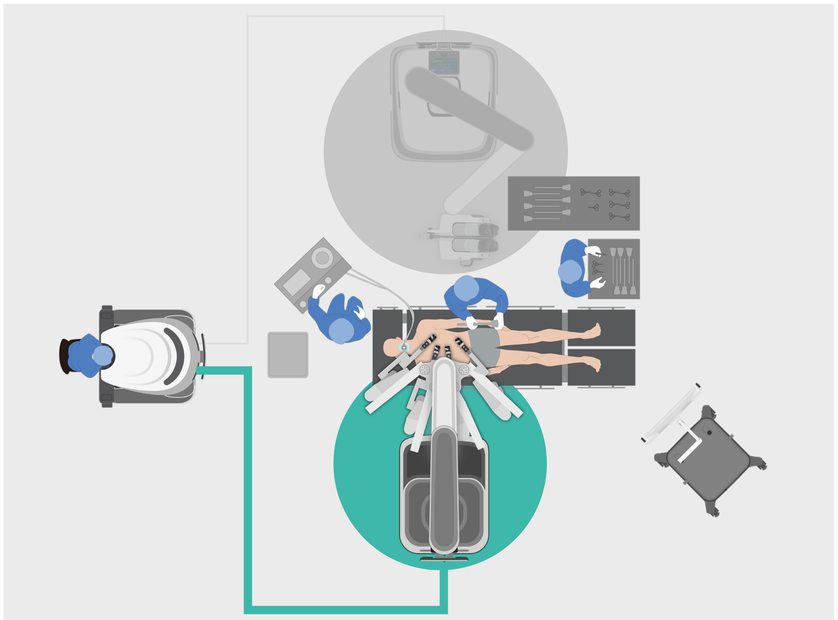
EDGE® Single & Multi-Port Integration Endoscopic Robotic Surgical System MSP2000

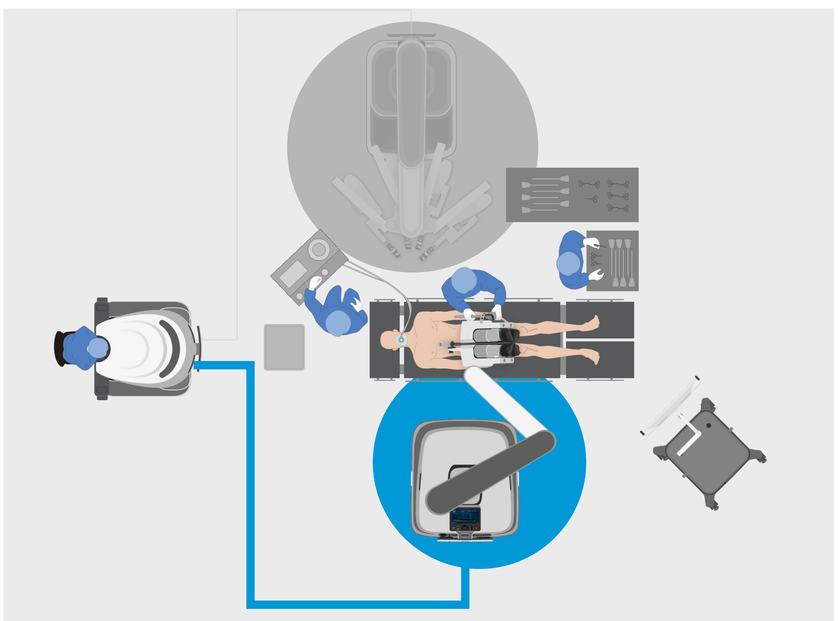


EDGE® MSP2000 Single & Multi-Port Integration Robotic Surgical System

Universal platform design enables seamless switching between multi-port and single-port surgical modes







The World's First Super System: A New Ecosystem for Surgical Robots

- Tailored Surgical
- Resource Optimization
- Telesurgery System
- Operations Service

II | 2 Specific
Tailored Surgical

Surgical treatment plans can be customized based on lesion location, disease complexity, and patient constitution to achieve personalized care that balances.
precise trauma control with maximized therapeutic efficacy.

01

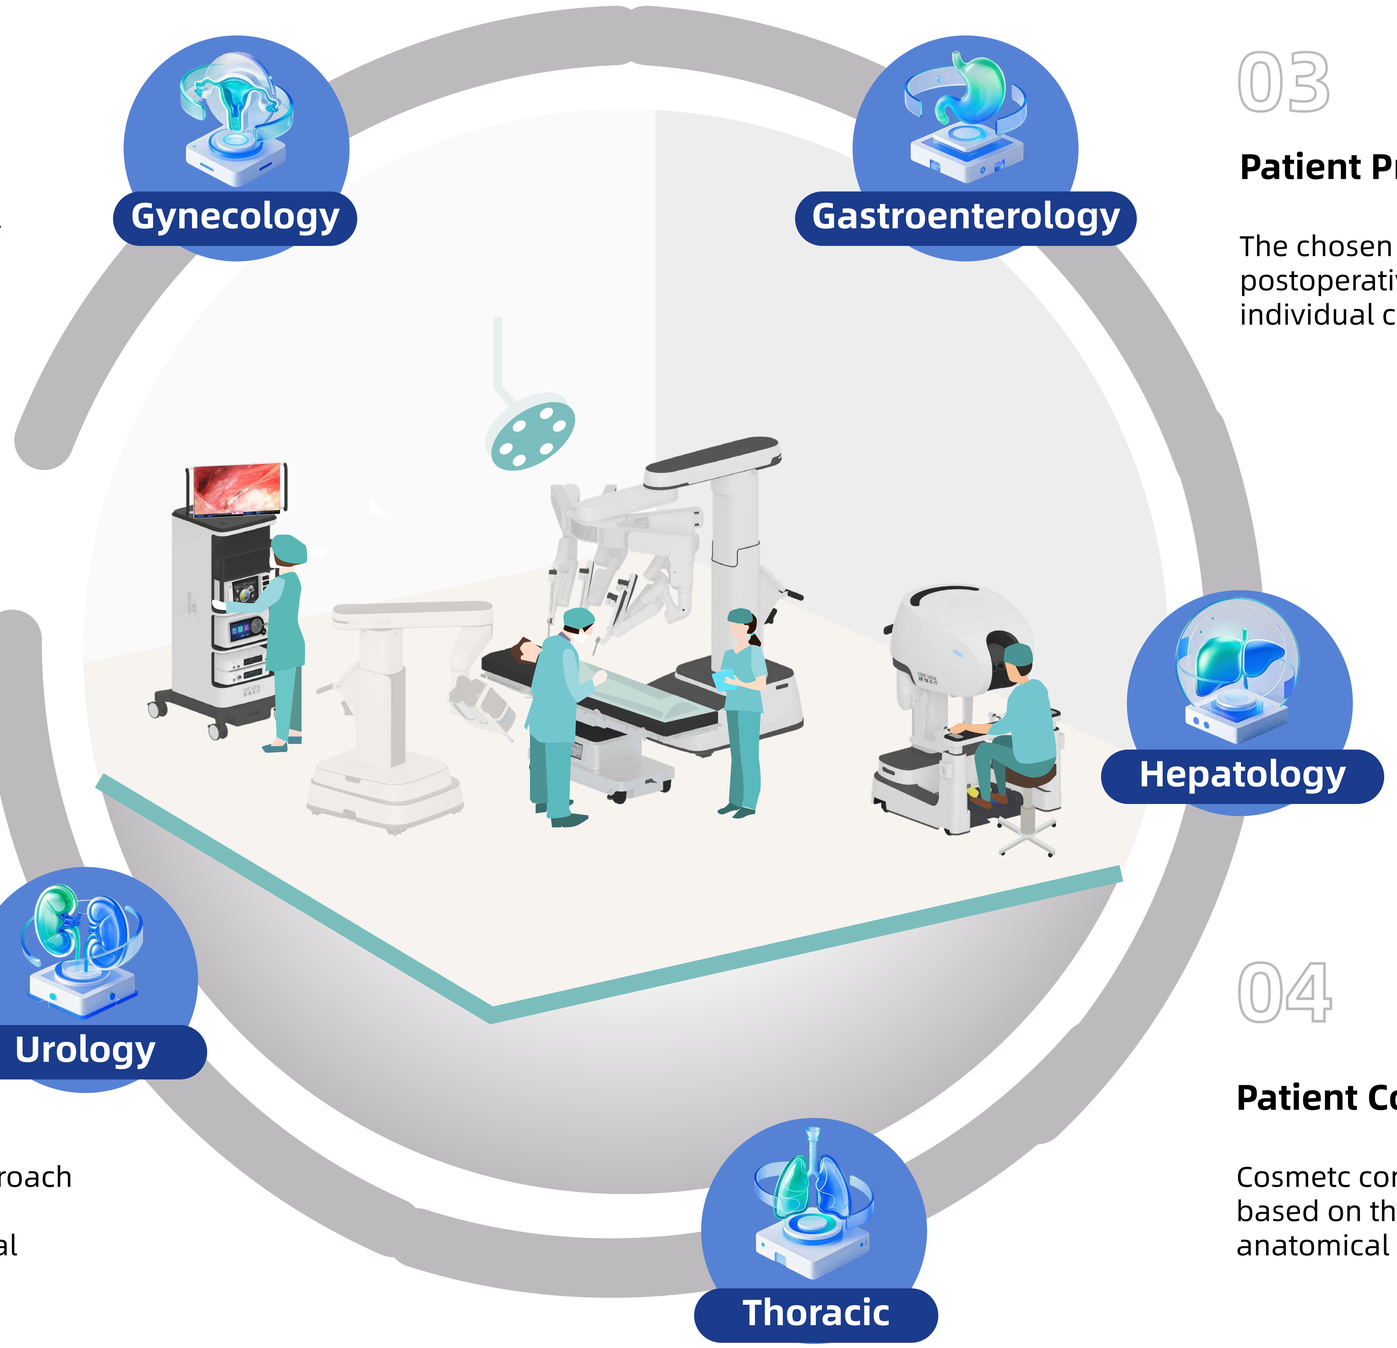
Location of lesion

The location of tumors in different parts of the same organ influences the choices of surgical approach.

02

Tumor Progression Level

Tumor staging directly determines the approach strategy, ensuring complete resction with adequate margins while sacrificing minimal invasiveness when necessary.



03

Patient Prognosis Requirements

The chosen approach directly impacts postoperative instrumentation tailored to individual cases.

04

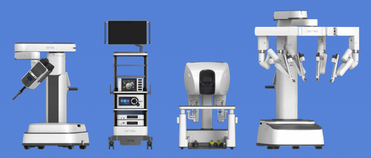
Patient Cosmetic Preferences

Cosmetc considerations must be personaized based on the patients's social context and anatomical characteristics.

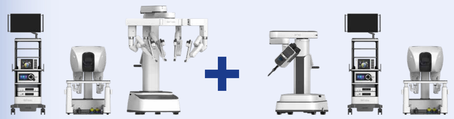
III | 3 Savings
Resource Optimization

One platform replaces two systems while delivering all their unctionality and clinical value.

Why choose MSP2000?



Single & Multi-Port Integration Robotic Surgical System



Multi-Port+Single-P ort Robotic Surgical System

Purchase cost

Maintenance costs

Single platform system with
only 4 devices
for simplified maintenance

Purchase cost

Maintenance costs

Two separate systems with a
total of 6 devices
for complex maintenance

IV | 4 Seamless
Telesurgery System

Brazil to Kuwait
Officially certified by Guinness World Records™ as the world record for **"Longest-Distance Remote Robotic Surgery"**

Poland to Belgium
Europe's longest-distance remote surgery

Rome to China
The world's first live broadcast of a transcontinental, ultra-long-distance human surgery

Cascavell to Campolago
Latin America's first remote surgery

EDGE CLOUD® telesurgery system

Low network
Image quality and operation feel like local surgery.

High data security
Adoption of private transmission protocol, which can effectively prevent network attacks.

Dual-connection guarantee
Local console can take over the operation seamlessly anytime to ensure patient safety
